GAME HEAD

Check your OBS audio

A track plan and a short recording before the real session.

LOCAL RECORDING / Windows + Discord desktop app

Date: _____ OBS version: _____ Profile: _____

1 Plan the tracks

Source	Track 1: mix	Track 2	Track 3	Track 4
Microphone	Yes	Yes	-	-
Game	Yes	-	Yes	-
Discord	Yes	-	-	Yes

Using a Twitch VOD track too? Adapt this plan first: track 2 is normally the VOD mix. Here it holds only the microphone.

2 Before you record

- ☐ Capture each source once. With separate application capture, disable Desktop Audio and avoid a second microphone input.
- ☐ In Advanced Audio Properties, assign sources as above. In Settings > Output > Advanced > Recording, also enable tracks 1-4.
- ☐ Record about 40 seconds: mic alone, game alone, Discord alone, then all three together. Use headphones.

3 Listen to the saved file

- ☐ In your editor, solo tracks 2, 3 and 4: each should contain only its intended source. Then listen to the mix on track 1.
- ☐ Voice clear over the game? No doubled sound, missing words or obvious distortion? Change one setting, then record again.

For editing, use the mix OR the isolated tracks; playing both duplicates the sound. A regular player may play only one track at a time.
